Located 9kms from Perth CBD, at the junction of Brearley Avenue and Dunreath Drive, Redcliffe Station is one of three new stations being built for the Forrestfield-Airport Link. The station, which incorporates local heritage and culture in its design, is due to open in 2021. When operational it will offer passengers a 15-minute trip into the city, with trains running every 10 minutes during peak time.

Redcliffe Station will service the growing local community, as well as promote a safe and vibrant transport precinct compatible with the surrounding residential and airport precincts.

Passengers will enter the station at ground level, where ticketing and information facilities are located. They will then continue through the SmartRider fare gates and travel by lift, escalator or stairs underground to meet the train. Skylights throughout the station will filter natural light down to the platform level to aid wayfinding. Between Redcliffe Station and the CBD the fare will be a standard one-zone ticket.

Construction of the new station will be the catalyst for residential and business development in the area. Work is ongoing on the underground station box structure and over the next three years the above ground features will also take shape.
Travelling to meet the train

**Redcliffe Station will form a bus/train interchange, with timetables designed to optimise travel times.** There will be six bus bays located at the station entry. Those alighting from the bus will have direct access to the station, rather than needing to cross any roads.

**For those driving to meet the train, there will be 500 parking bays available.** The station’s striking geometric roof shape is easily visible from the furthest point of the car park and will help guide passengers to the station’s entry. The entire station precinct, including the car park, is within a 400m radius. Accessible bays, as well as drop-off bays for passengers getting a lift to the station, will be located closest to the station entry.

**Pedestrians and cyclists will also benefit from enhancements made to shared paths around the station precinct.** A comprehensive network of safe paths will help guide people in and around Redcliffe Station. The station’s forecourt will provide a link between Bulong Avenue and Central Avenue so passengers and residents can use the station as a thoroughfare.

---

**Station location**

Redcliffe Station is being built in the residential area of Redcliffe to service the growing community, as well as the airport business park and direct factory outlet. The location of the station has not been selected to service Terminals 3 and 4 as Perth Airport’s redevelopment plan will see the consolidation of all major domestic airport activities to Airport Central (Terminal 1) by 2025.

---

**Public art in the station**

The passenger experience will be enhanced by the integration of public art with the station’s architecture. Local curator Maggie Baxter has been chosen to facilitate art to be displayed in and around Redcliffe Station. An installation, called Leaf Stories, will feature 12 leaves scattered throughout the station. Each leaf will be engraved with text taken from the Belmont Museum and contributions from the local community.
